

Can a fiber optic patch cord be patched twice Why

Overview

Thus, when connecting patchcords, fiber 1 (or the odd numbered fibers) can always go to the transmitter and fiber 2 (or all even numbered fibers) goes to a receiver and proper connectivity is maintained, allowing the use of straight through duplex patch cords. 2) The extra length of the fiber patch cord must be within 500mm. Another way is to put a switch at Location B and interconnect using SFP modules. Fiber optic patch cables are found almost everywhere; cable television networks (CATV), data centers, computer networks, and telephone networks.
