

Can fiber optic cable still be used when connected to a switch

Overview

Switches: Ethernet switches with built-in fiber optic ports allow for direct integration of fiber optic cables into the network infrastructure. Moreover, when it comes to bandwidth, no currently available technology is better than single-mode fiber. Fiber provides: Increased internet signal bandwidth. It offers remarkable characteristics such as high bandwidth capacity, immunity to electromagnetic interference, low latency. As network speeds continue to advance from 1 Gb and beyond, connecting network switches via copper limits data speed and the ability to upgrade in the future. Other than entry level network switches, most of today's network switches include one or more GiBC (Gigabit Converter) or SFP (Small. Traditionally, network switches have been connected using copper cables, but with the increasing demand for high-speed and reliable connectivity, fiber optic cables have gained prominence.
