

Having an emergency plan in place is critical for minimizing downtime in the Passive optical infrastructure through fiber optic cables. Any disruptions or damage to these cables can have consequences, such as communication outages, loss of data, economic instability and disruptions in services. FOA Guide - Fiber Optic Restoration Introduction If something happens, it's important to not panic. Casey, City of Albany, GA) Designing. Once an accident happens, there are two major problems: restoring service to the cable and doing it quickly to minimize the impact on customers. With unlimited resources, it is always possible to locate the perfect replacement cable and splice it in using existing splice points. Significant plant damage, many broken poles and damaged devices. Plan now for a "terabit future" Middle mile networks today are probably aimed at 100G speeds or above. Terabit speeds on coherent networks are not far. Fiber optic network expansions and the demand for Fiber To The Home (FTTH) has put a high demand on fiber optic contractors and contract splicing teams meaning providers can no longer rely on these sources for quick response times.
