Two types are available: integrated arrayed waveguide gratings (AWG), offering low cost, compact size, and precise ITU. Overview: Dense Wavelength Division Multiplexing (DWDM) is a technology that increases fiber bandwidth by transmitting multiple optical carrier signals on a single optical fiber at different wavelengths within the C-band (1525–1565nm) or L-band (1570–1610nm). Our DWDM modules include MUX/DEMUX. The Compact CWDM Module (MCWDM, CCWDM, or compact coarse wavelength division multiplexers) from Lfiber is the perfect means for adding capacity to your fiber optic network without installing additional. Since the different colors of light have different wavelengths, they do not interfere with each other.
