

How much does fiber optic splicing material cost

Overview

Fiber optic splicing costs vary widely depending on project size, location, fiber type, and site conditions. The "per splice" rate is the most. The total expenditure for splicing a fiber optic cable is rarely a flat fee. Instead, it is a calculation based on the number of strands, the environment of the repair, and the precision required for the specific network application. We offer fiber optic materials from Test Equipment, Bulk Cable and Fusion Splicers to Tools, Patch Cables and Consumables. I usually bill T&M, but it works out to about \$175-250 for setup/teardown per site and \$4-7 per fiber for prep in a new tray in an existing case and splicing depending on if it's flooded or dry cable. Add another \$50-75 to prep a new case endspan or \$100-150 for a new case midspan with overcut on.
