

# How to check the IP address of a telecommunications fiber optic cable

## Overview

To check a fiber connection, connect a jumper to the optical source port and the other end to an optical meter. Press the “test” or “signal” button to send a signal from the source to the meter. Let's dive into the specific steps and. Very briefly, you can find your router's IP address in your Command Prompt (Windows), in your Network settings on Macs, iPhones, and iPads, and in Advanced Network and Internet settings on Android devices. For more detailed instructions, read on. It integrates the reception and conversion of fiber-optic signals, translating XGSPON or XGS-PON protocol signals into Ethernet. While there are many different fiber optic cable tests, the most common version is an insertion loss test, also known as an attenuation, jumper, or connectivity test. This test requires a special testing kit and protective eyewear, but it will help you diagnose problems with the cable's.
