

How to connect two servers to a switch

Overview

Just connect the two using a cable and configure both ports to have IP addresses. This link should use a completely separate subnet from your main LAN, e. if the 1G switch carries 192. 0/24 (or even better, a. Contact the administrator of the authorization policy for the computer server2” Specify “connect to each other” Guessing the servers are not part of the same domain. You need to specify the credentials of the target server. they are connected. Quick question from a networking newbie about best practices - if I have a number of 1U rack mounted servers, say 24 or 48, each with multiple Ethernet ports, e. g 4 - RJ45 ports for each of primary data, redundant data, console / management, KVM in this example, would it be best to cable each same. There are a lot of ways to connect switches. This can be done using various methods, including daisy chaining, stacking, and cascading. Each method has its own advantages and disadvantages, which we will discuss in detail later. Why Connect Switches Together?

Connecting switches together. So, my setup consists of two nearly identical Ubuntu 20. 04 servers with an unmanaged network switch connecting them. I wasn't entirely sure what to put for the default gateway because this is supposed to be a peer-to-peer.
