

How to make a 1-to-3 point-and-shoot light filter

Overview

Let me tell you, making this little rainbow filter and shooting with it have been so much fun, so I encourage you to try it if you are looking for something new! Here's how to make your own. As you advance, learn the secrets of incorporating two and three-light configurations, adding depth, drama, and precision. A diffusion filter, or as LEE used to call them 'Softs', creates a flared point of light around the light source. Imagine taking a shot of car head lamp on a foggy day, the bright part of the shot glows outwards creating a radiating flare. The distinction to make here, is that diffusion filters. You can make your own softbox with a cardboard box, some aluminum foil, a piece of white fabric (shower curtain, tracing paper, whatever you've got), and a bit of tape or glue. You can create amazing portrait lighting patterns with one single light! Master a profitable photography niche to establish your brand. To prove my point, this light is.
