

How to seal the fiber optic cable after connection

Overview

The generally recommended solution is to seal cables and buffer tubes with silicone sealant to prevent gel leaks. All closures must be capable of protecting the splices and fibers from water damage. Many NEMA and IP-rated potted seals, grommets and cable glands can shield fiber optic components from water spray or temporary submersion at a limited depth, but they fall short of a moisture-tight hermetic seal and will allow gases. By following these detailed steps, the installation of your Fiber Splice Closure will be secure, organized, and maintained, ensuring high performance and longevity of your fiber optic network. Installing a fiber optic splice closure efficiently and effectively requires attention to detail and. Once fibers are spliced, they need to be protected. (2) Insert the sealing strip into the sealing groove of the lower half of the joint box.
