

# How to set up a disk array with fiber optic connection

## Overview

When utilizing Linux as an initiator for fiber channel access to the PowerVault ME5 series Storage Array, this guide outlines best practices for configuring and optimizing multipath with Fibre Channel storage on widely used Ubuntu-based systems. Configuring multipath with Fibre Channel (FC) storage is essential for ensuring high availability, redundancy, and performance in your large-scale on-premises data center environments. For basic setup information such as racking, power cabling, and recommended handling procedures, see the Getting Started Guide for your Storage Array at. Go to Dell EMC Online Support (<https://support.com>) to ensure that you are using the latest version of this document. This guide describes the features and setup procedures for Windows Server 2019, Windows Server 2016, Windows Server 2012 R2, and Windows Server 2012 host interfaces to Dell EMC. Follow the instructions outlined below to attach fiber optic jumper cables directly from HCP G11 Node s to storage arrays. The HCP G11 Node s and the storage arrays must be in the same rack in an appliance configuration in order to set up a direct connection without Fibre Channel switches. This section provides introductory information about how to use with Fibre Channel SAN.
