

How to use a direct-fusion pigtail box

Overview

In this video and step by step tutorial, we take you through the basic steps on how to fusion splice pigtails using a fusion splicer. The most efficient way to terminate a fiber run is by using a pigtail. A fiber pigtail is a short length of optical fiber that comes with a high-quality, factory-polished connector already installed on one end, leaving a length of exposed glass on the other. When Do You Need to Splice Fiber Optic Cables?

Fiber optic cable splicing. Fiber pigtails are simple in appearance, yet essential in function. They are the bridge between fiber optic cables in the field and the equipment or patch panels that manage them. Featuring a unified construction allowing for easy fiber identification and rapid installation, these assemblies are built to exceed all TIA and Telcordia requirements.
