

# Huawei Core Switch Debugging Steps

## Overview

Login via console with old password. // Check privilege of user: CONSOLE 0 is 15. // Set DNS. This document provides the configuration commands of each feature supported by the CX11x&CX31x&CX91x series switches module, including the syntax, view, default level, description, parameters, usage guideline, related commands, and example of each command. This document provides the configuration. Huawei: How to use debugging on CLI using SSH or telnet?

For more in-depth troubleshooting, debugging on the CLI (Telnet or SSH) can be very helpful. This article describes the steps required to activate debugging. For example: Replace USERNAME with the new username, set the password, define service-type (telnet, ssh, etc. ), and specify the access level (1-15). Verify that your settings are configured correctly using commands like display local-user. Log in. Check the LLDP neighbors: Use the command "display lldp neighbor" to view the LLDP neighbors of the switch.
