

Install a small router with gigabit fiber optic cable

Overview

For best results, choose a router that supports gigabit or multi-gigabit speeds and modern standards like Wi-Fi 6 (802.11ax). Installing the router in a centrally located position within the home will allow for the best coverage and should be a key focus doing. To connect your fiber optic cable to a router, ensure you have the following: Fiber optic modem (ONT): Most fiber connections require an Optical Network Terminal (ONT), provided by your ISP. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled). Fiber internet uses fiber optic cables instead of coaxial cables or metal wires to transmit data. Unlike traditional cable internet, which relies on electrical signals, fiber optics transmits data using light signals through thin glass or plastic strands. This. A small box on the outside of your home called a NID is installed and the fiber is coiled in there and connected to a fiber that runs into the home.
