

Intelligent Monitoring Module for Display Cabinets

Overview

Intelligent monitor modules are addressable and designed for use with Silent Knight® Series FACP's. They are intended to function with 2-wire systems, where the individual address of each module is selected using the built-in rotary switches. Monitoring temperature inside control cabinets is critical due to safety risks like overheating, fire, or failure of high-voltage components. Traditional electrical sensors are difficult to install, prone to signal interference, and cannot accurately detect internal hot spots masked by thermal mass. With the continuous expansion of data center scale and increasing equipment density in cabinets, monitoring power supply and ambient temperature has become critical. APPLICATIONS: Cabinet, Closet, Cage, Room, Edge Computing, Remote Terminal, Outside Plant, Customer Prem, Cell Tower Site, Microwave site, Repeater site, 4G/5G Small Cell Poles The TELSEC MP3 is designed to address the monitoring. The IM (X) 12-CCM (Cabinet Condition Monitoring) can be installed and even retrofitted in virtually any cabinet or any protective enclosure to continuously check the current protection degree offered.
