

# Is a cable management rack the same as a cable loader

## Overview

In most cases cable ladders are the preferred choice, however; cable trays are better suited when aesthetics and radio/electromagnetic interference are important considerations. Cable trays are also useful for protecting sensitive cabling and tubing. A cable rack is a structure designed to support and organize multiple cables, allowing for easier access and management. Overhead cable management. This article will discuss the four most common types: cable tray, cable basket, cable ladder, and cable trunking. While this list is not exhaustive, these are the ones you'll likely run into most frequently in electrical installations. Generally, cable ladders are preferred for supporting high volume or heavy cabling, especially if there are long spans between. A well-designed network rack cable management system not only makes cabling neater but also improves heat dissipation efficiency, reduces the risk of failure, and leaves room for future expansion.
