

New Lebanese Fiber Optic Trench

Overview

Hezbollah has begun using small, fiber-optic cable-guided drones in southern Lebanon, a tactic widely seen in the Ukraine war, to bypass Israel's electronic jamming systems. More than 325,000 households will benefit from this rollout, which is expected to be completed within 16 to 24 months, according to the telecommunications minister and Ogero. As Israel continues its ground offensive into Lebanon, it appears that Hezbollah is increasing its first-person view (FPV) drone strikes on IDF armor and personnel. Israel is still searching for effective ways to counter Hezbollah's increasingly sophisticated drones in southern Lebanon, Israeli media reported Saturday, as the group's. An fpv or First-Person View, drone Stalker, using fiber optic, flies during tests at an undisclosed location, on July 10, 2025, amid the Russian invasion of Ukraine. This "wired" technology—already a staple on Ukrainian battlefields—allows operators to.
