

Outdoor constant temperature cabinet cold aisle 1000mm depth manufacturer

Overview

Maintain optimal temperature control in your data center while ensuring easy equipment access with our containment dual sliding door, accommodating aisle widths. Isolate hot air and optimize cooling with this adjustable vertical wall. Cold aisle containment creates an enclosed corridor in front of server cabinets, ensuring that the coldest air goes directly into equipment intakes. By isolating the cold aisle, containment reduces unintended mixing of cold supply air with hot exhaust air, maintaining uniform, predictable. Our aisle containment systems are designed to optimize energy use and enhance airflow management in data centers, both new and existing. With three finish options to choose from, these dual hinged doors can complement any data center design. The one-tool design allows for quick and easy installation, removal, and re-installation with exclusive Magswitch® technology — no drilling required.
