

# Router cannot reach 100 Mbps fiber optic speed

## Overview

Restarting your router is one of the easiest ways to resolve minor internet speed issues. Often, these devices just need a fresh reboot to clear out temporary glitches and restore your connection to full speed. Wait for about 60 seconds to make sure it. The first step is to ensure that your network equipment is capable of supporting 1 GBit/s speeds. Look for a model that has Gigabit Ethernet ports labeled as 10/100/1000 or GbE. If your modem only supports. With upload and download speeds that often exceed 1,000 Megabits per second (Mbps), fiber optic internet has the capacity to provide a seamless online experience while powering all of your connected devices at once. Wired speed, however, is BAD: consistently only 75-110Mbps up/down via direct ethernet. What I've tried: 1) replaced router (originally given a C4000BG. Many factors can affect your Internet connection speed for devices on your home network.

## Article Content

I tested this cable without router and get 300mbps in my desktop, but when I connect the cable in my router, the lan and wifi connections are limited to 100mbps.

What if my Router Speed is capped at 100 Mbps?

If it's still connected at 100 Mbps, try with another Cat5e/6 cable or change the port of your ISP device, where you're connecting the TP-Link router (if possible).

Mikrotik router limiting connection to 100 Mbps

After repeating the test with my laptop using the same cable that was used by the mikrotik router, it again reached speeds of about 300 Mbps without any issues.
