

Selection of Dedicated Optical Communication Bit Error Rate Analyzer for IDC Data Centers

Overview

Dimension Technology's BERT800 bit error tester series offers a comprehensive solution for testing and verifying high-speed optical transceiver modules. These versatile devices can be used in various applications, including mass production, performance verification, and reliability. Highly configurable, multi-protocol, multi-port test platform for R&D and system verification of optical. A solution that enables centralized support, on-demand test and live results analysis to support and coach. The Company's test & measurement solutions are used in product development, manufacturing. Even a digital data transmission system is not totally error-free — statistical fluctuations related to noise influences cause a small percentage of the transmitted bits to be corrupted. The average fraction of incorrectly transmitted bits is called the bit error rate.
