

Solutions to New Energy Internet Problems

Overview

The main objective of this paper is to address how the Internet of Things (IoT) would meet the requirements of smart and distributed power generation. We did a comprehensive literature review to provide insights into the IoE applications and enlighten the current challenges. The Energy Internet represents a transformative paradigm integrating advanced power systems, distributed renewable energy, and digital technologies to achieve efficient, resilient, and sustainable energy management. (TCEP), the International Energy Agency (IEA) reports that worldwide. The Internet of Energy (IoE), as a new concept, transforms the way of energy production, supply, and consumption to fulfill high-energy demands via a smart network of industrial energy producers and consumers. In this paper, we propose the design of a resilient IoE, envisioned to make the global IoE system architecture intrinsically resistant to disasters, and investigate the requirements.
