

South Asia Dust Distribution Box Consultation

Overview

This page displays distributions of Asian dust, anthropogenic aerosols, and tracers (chemical components) forecasted by Chemical weather FORecasting System (CFORS). Dust plays a very important role in the Earth's climate system by its direct and indirect effects. Deserts in northwestern China contribute a large amount of dust particles, both inland and outside, while the vertical distribution and transport mechanism of dust still have many uncertainties. Using. Forecast is updated at 0800JST (2300UTC) everyday. Click figures to start animation. Arbitrary two dimensional sections (time-height, lon-lat, lat-height, lon-height etc. We specialize in providing efficient solutions, including suction arms, portable dust extractors, dust collectors, cartridge filters, sleeve. We present a 3-D climatology of the desert dust distribution over South and East Asia derived using CALIPSO (Cloud-Aerosol Lidar and Infrared Pathfinder Satellite Observation) data. To distinguish desert dust from total aerosol load we apply a methodology developed in the framework of EARLINET.

Article Content

New insights into the Asian dust cycle derived from CALIPSO lidar ...

These new findings and quantification of the Asian dust cycle will help with validation of the simulations provided by global and regional climate models and enable further evaluation of the ...

Nine-year spatial and temporal evolution of desert dust ...

In this section we present and discuss the vertical distribution of dust aerosols in the atmosphere over South and East Asia; thus, we present and ...

Nine-year spatial and temporal evolution of desert dust aerosols over ...

In this section we present and discuss the vertical distribution of dust aerosols in the atmosphere over South and East Asia; thus, we present and discuss the vertical dimension of the 3 ...

Three-Dimensional Distribution and Transport Features of Dust and ...

The polluted dusts of South Asia and the Indian subcontinent are mostly contained in the boundary layer in winter, but they could extend much higher in spring and summer, which favors their ...

Upper troposphere dust belt formation processes vary ...

Here, we characterize and understand upper-troposphere dust sources and transport with an improved dust dataset derived from A-train satellite lidar and radar measurements and an air ...

Products

Whatever your application, Coral Asia has the right solution to enhance your workplace's air quality and safety. Explore our extensive product range and contact us for a free consultation.

Forecast for distributions of Asian dust and anthropogenic aerosols in ...

This page displays distributions of Asian dust, anthropogenic aerosols, and tracers (chemical components) forecasted by Chemical weather FORecasting System (CFORS).

Asia Pacific Industrial Dust Collection Equipment Market ...

Asia Pacific region accounted for over 35% of the global industrial dust collection equipment demand in 2024, driven by large-scale industrialization in China, India, and Southeast Asia.

Arctic amplification-induced decline in West and South Asia dust ...

On the basis of several high-quality remote sensing products, we detect a consistently decreasing trend of dust loading in West and South Asia over the last two decades.
