

South Korea Data Center EMS Anti-Trace Solution

Overview

Our system enables high-speed serialization up to 220 cartons per minute, generates and verifies unique GS1 DataMatrix codes, supports OCR/OCV verification, and stores all serialization data locally for batch upload to the EDMS/KPIS platform. Darktrace, the world's leading AI company for cyber defense, has today announced that South Korea's representative public energy enterprise, Korea Midland Power (KOMIPO), has deployed Darktrace across its vast digital environment. A leader in the domestic electric power market, KOMIPO operates six. nd hybrid networks. Korean AI startup Elice Group is now moving deeper into that layer of the stack. The company has partnered with cybersecurity firm AhnLab to build security. The data centre market influencers of technological advancements, such as implementation of cloud computing, deployment of 5G networks, government digitalization initiatives and increasing mobile and internet penetration, have significantly accelerated the demand for data centres. Sun Teknovation's Offline Track & Trace system provides a robust solution. SEMES is a prominent manufacturer in the semiconductor equipment sector, focusing on core pre-processing equipment for flat panel displays (FPD). With two decades of experience and significant annual revenue, the company is committed to technological advancement in the semiconductor industry.
