

Strange fan noise on the optical switch

Overview

Whirring or Humming: This is the most common noise and often indicates the fan is simply running at a higher speed. It's usually normal, especially during demanding games or when the console is docked. It turns peaceful play into a distracting mechanical racket. Understanding console cooling systems is key for top performance. Odd sounds from your Switch mean it's. Your Nintendo Switch® is built for adventure—but when it starts sounding like it's about to take off, something's up. Our experts see this problem all the time, and the good news is, most of the time it's an. Let's examine all the potential reasons for this issue: If the Buzzing noise occurs when Docked and Undocked: The Switch is trying to maintain its optimal temperature range while playing a hardware-intensive game, resulting in the fan working harder. If you found this post you are probably googling why your Switch Fan is so loud, as if it is grinding on something, even making the switch rumble a little, I'm sorry to inform you but your fan is dying.
