This article provides a comprehensive guide to the lifecycle of fiber optic products, including patch cables, MPO/MTP assemblies, splitters, and FTTA solutions, with practical recommendations for extending lifespan, maintaining performance, and assessing end-of-life. Wireless, DOCSIS, and DSL technologies have required continuous outdoor infrastructure upgrades to increase speeds and capacity, and carriers have recognized the value of fiber as these incremental approaches typically include more optical fiber deeper into the network toward the subscriber. The foundation of an. The lifecycle of fiber optic products involves multiple stages, from initial design and manufacturing to deployment, maintenance, and eventual upgrades or replacement. Proper lifecycle management ensures reliability, cost-effectiveness, and minimal environmental impact (2). From FTTH optics to industrial applications, backbone transmission, and cloud data centers, fiber cables can last for decades under appropriate installation and handling. It could hurt an installer or get them sued by an irate network owner.
