

Switching to fiber optic means the router can no longer be used

Overview

When switching to fiber internet, many users wonder if they're able to use their own router instead of the one provided by their internet service provider (ISP). In this guide, we'll explain router compatibility, setup steps and whether upgrading your router is necessary to maximize fiber speeds. Fiber optic internet represents a significant leap in internet technology, utilizing thin strands of glass or plastic to transmit data as pulses of light. This method offers vastly superior speeds, lower latency, and greater reliability compared to traditional copper-based technologies like DSL and. There is no such thing as the “best” routers or Wi-Fi systems for a particular Internet service provider or type—Fiber-optic, Cable, or whatever. Fiber internet is a bit different from cable or DSL because it doesn't use a standard modem.
