

Testing an optocoupler with a pointer-type multimeter

Overview

Test a photocoupler by setting a multimeter to resistance mode. A good one shows high resistance (OL) with the input LED off and low resistance with it on. The test checks if the optocoupler output fails to switch when you power it. This detailed guide will walk you through the process of testing an optocoupler using a multimeter, covering various scenarios and providing practical advice to ensure accurate results and avoid common pitfalls. A. Optocoupler is one type of ICs, It isolates input and output section by using optical technology this feature increase safety of circuit.
