

## **Use of optical cable laying frame**

### **Overview**

An Optical Distribution Frame (ODF) is a dedicated unit designed to organize, terminate, and interconnect fiber optic cables. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. The charter of the FOA was to promote professionalism in fiber optics through education, certification, and. Let's take a detailed look at the installation and construction requirements of optical cables and the construction plans for optical cable laying. (1) Check the routing direction, laying method, and joint position of the optical cable. Preference will be given for Horizontal Directional Drilling (HDD) wherever. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth.
