

What are the cable tray supports on the roof called

Overview

Roof Block With Strut refers to a common rooftop support assembly used to secure equipment such as solar panels, HVAC units, and cable trays while distributing loads to roofing structures without penetrating the membrane. The PHP Cable Tray Support is designed for cable systems of various widths at most specified heights above the roof surface. Layout isolation pads, (provided by contractor), according to the design and layout. Insert legs of duct support into bases and attach with 2-1/2" bolt and 1/2" nut. They offer superior load capacity and dramatically reduce installation time by replacing slow, heavy and labor-intensive methods for support of. Finish making your selections or clear them to view relevant specifications.
