

What happens if your broadband fiber optic cable is unplugged

Overview

Understand Service Impact: Unplugging your main fiber optic cable will temporarily disable your internet connection or any service relying on that fiber link. Power Down Equipment: Whenever possible, power off the connected device (e., modem, router) before unplugging the cable. My network provider is still fixing things coz of that and it's taking a lot of time which is understandable. While these cables are engineered for durability (with some rated to last 25+ years), they are not invulnerable. Even. The issue is easy to reproduce: * Be connected to the internet * Unplug the fibre optic from the small white box * Eventually, the Sky router will realise it is not connected to the internet and its LEDs will change to "green orange green orange" * The internet will then not work at all, not via. If the status light ring is off (no color), it means your router is not connected to the network.
