

What is a switch with an integrated optical port called

Overview

Co-Packaged Optics (CPO) is an optoelectronic co-packaging technology that integrates an optical module (responsible for optical signal transmission and reception) and a switch ASIC (responsible for electrical signal processing) into the same physical package. Enterprise LANs use the RJ45 port on 100/1000BASE switches. It connects access layer devices and uplinks from desktop switches or directly to end devices. RJ45 ports remain essential for. An SFP switch uses Small Form-Factor Pluggable (SFP) modules to form a network switch for high-speed connectivity between devices. These interchangeable modules support various media types, including copper or fiber-optic cables, providing flexible networking options based on specific requirements. It operates at the data link layer of the OSI model and ensures seamless communication between devices by forwarding data packets. At the SC25 SuperComputing conference in November, NVIDIA announced that GPU computing facility operators, including Lambda and CoreWeave, as well as the Texas Advanced Data Center (TACC), will adopt its Quantum-X Photonics CPO switches.
