

## What type of pigtail does SFC use

### Overview

SC Fiber Optic Pigtail: The SC pigtail cable connector features a non-optical disconnect design with a 2.5mm pre-radiused zirconia or stainless alloy ferrule. If you encounter these issues, you can use built-in Windows repair tools—Deployment Image Servicing and Management (DISM) and System File Checker (SFC)—to scan for corrupted system files and restore missing or damaged Windows components, helping to return your system to a stable, working state. This is the first decision. There are four common connector types. If your switch has LC ports, use LC cables. ST Pigtail: Features a bayonet-style coupling mechanism, often found in older multimode. The fiber optic pigtail is a short terminated optical fiber with a connector on one end, used to facilitate easy connections between fiber optic cables and various devices.
