

Where should the fiber optic switch be located

Overview

Wondering where to install your ONT inside?

Here are a few smart options: Utility room: This is a great choice since it's often close to your home's wiring hub. Home office: If you're working remotely, placing the ONT nearby can help ensure you get a rock-solid connection for all. The fiber is connected to an Optical Network Terminal (ONT) inside or outside your home. The ONT converts the light from the fiber into electrical signals that run via an ethernet cable. Unlike traditional electrical switches, which process data via copper-based transmission, fiber optic variants utilize light signals to improve data integrity, speed, and resistance to electromagnetic. It converts those light signals into the digital data your devices can use, making it the final stop for your fiber connection before it gets to your router. It ensures a clean, stable interface between the ISP's fiber network and your router—impacting speed, latency. Fibertronics, Inc.
