

Where was the fiber optic cable removed from

Overview

Now, SubSea Environmental Services is pulling it from the seabed close to Portugal. The world's first fiber-optic cable became operational on December 14, 1988, and retired in 2002 after 14 years of use, when a fault made it too expensive to repair. Crews recovering the first transatlantic fiber-optic system, TAT-8, are bringing up repeaters, steel "fish-bite" armor, and copper power conductors, all of which are now being dismantled and processed through modern recycling facilities. TAT-8, which began service in 1988 and went offline in 2002, is now being recovered from the seabed near Portugal — marking the end of a system. In 1988, when it was initially installed, the TAT-8 was the very first undersea fiber optic cable. It revolutionized internet cables but was retired in 2002. Recovery helps clear paths for new cables & reclaims valuable materials like copper. The first transatlantic fiber-optic.

Article Content

The world's first transatlantic fiber-optic cable is being ripped up ...

Built by AT&T, British Telecom, and France Telecom, the cable entered service on December 14, 1988, and was taken out of operation in 2002 after developing a fault too expensive to ...

Say Goodbye to the Undersea Cable That Made the Global Internet ...

History was unmade last year, as engineers began the massive project of ripping the first-ever transoceanic fiber-optic cable from the ocean floor. Just don't mention sharks.

The End of a Pioneer: TAT-8, the First Transatlantic ...

Proving the Fiber-Optic Model TAT-8 was the eighth transatlantic cable system, but it fundamentally changed how global data would move. Its capacity ...

TAT-8 Fiber-Optic Cable Removal

The first transatlantic fiber-optic cable, TAT-8, laid in 1988, is being removed from the ocean floor after 37 years. It revolutionized internet cables but was retired in 2002.

First Transatlantic Fiber Optic Cable Pulled from Ocean: Inside the ...

This groundbreaking infrastructure was the first to carry fiber optic data across the ocean, linking Europe and the United States. More than three decades later, this pioneering cable has been ...

The First Transatlantic Internet Cable Ever Is Being Pulled From The ...

Subsea Environmental Services is currently removing the cable from the seabed, after which it will be recycled. The general goal, however, is to clear the seabed where the TAT-8 cable ...

Say Goodbye to the Undersea Cable That Made the ...

History was unmade last year, as engineers began the massive project of ripping the first-ever transoceanic fiber-optic cable from the ocean floor. ...

Transatlantic TAT-8 Fiber-Optic Cable is Being Removed from the ...

For over twenty years, the Trans-Atlantic Telephone 8 (TAT-8) cable sat on the ocean floor in its out-of-operational-use state. Now, SubSea Environmental Services is pulling it from the ...

The First Transatlantic Internet Cable Ever Is Being ...

Subsea Environmental Services is currently removing the cable from the seabed, after which it will be recycled. The general goal, however, is to clear ...

The End of a Pioneer: TAT-8, the First Transatlantic Fiber-Optic Cable ...

Proving the Fiber-Optic Model TAT-8 was the eighth transatlantic cable system, but it fundamentally changed how global data would move. Its capacity was fully exhausted within just 18 ...

The world's first transatlantic fiber cable is being pulled off the ...

Crews recovering the first transatlantic fiber-optic system, TAT-8, are bringing up repeaters, steel "fish-bite" armor, and copper power conductors, all of which are now being ...

Why The World's First Transatlantic Internet Cable Is Being

This process of eventual disuse has occurred for many undersea cables, yet most have remained on the ocean floor. In fact, around 2 million kilometers (~1.2 million miles) of these cables ...
