

Wiring of the power distribution box in the fire elevator machine room

Overview

Conductor and wireway fill, approved flexible traveling cables and secure supports are specified, and only elevator-related wiring is permitted in hoistways. Grounding and bonding follow Article 250 and GFCI protection is required at pit, machine-room and car-top. In Oregon, Raceways and conduits for the connection of elevator devices shall only enter the machine room to the extent necessary to connect the devices attached thereto. Emergency or standby. The installation of all electrical wiring in hoistways and machine rooms, except as may be provided elsewhere in these regulations, shall comply with CCR, Title 24, Part 3, Article 620. Minimizing the need for. The basic requirement is for minimum clear distances of various depths for equipment operating at 600 V or less, nominal, depending upon voltage to ground and lateral distance to insulated or grounded surfaces or exposed live parts (not an issue in elevator machine rooms). Elevator machine room ventilation and cooling equipment.

Article Content

Stumped by the Code? NEC Requirements for Elevators and Escalators

Where there is no machine room, control room, machinery space, or control space outside the hoistway, the overcurrent device must be located outside the hoistway and accessible to qualified persons only.
